

## TOOLS ..... some of the basics

A couple of essential items .... a spark plug spanner and a front stub axle nut t-bar tool at \$POA each

And here are two tyre changing tools that make this job as easy as pie .....

On the left is our 3 piece tyre removing and fitting tool that makes rear kart tyres a breeze to fit - at only \$POA

And pictured in the centre is our tyre bead breaker. This can hold all size kart rims - for \$POA.

And a great tool for engine builders. An adaptor for screwing a dial indicator into the spark plug thread of an engine. Neat and easy way to take measurements. \$POA for the adaptor with extension pin.

Engine RPM Tacho with max. recall memory. Our cheapest at \$POA

Engine Hour meter , can be attached to plug wire or mounted remotely. Just \$POA.

**Battery fuel pump - a snap of an idea and just \$POA**

In our Technical Info section we have added information and downloads to help 2 stroke engine builders. One of the downloads is a program that will assist you in designing an expansion chamber - it is really neat and simple, and for purchasers of our MOTA software it will allow you to make an initial design to suit your engine. [Take a look here](#) at this part of our site.....
